

➤ Harte & Garter, Windsor

In September 2007, SBL completed an integrated voice and data system for the Harte and Garter hotel in Windsor. A member of the Folio group of hotels, the Harte and Garter is currently undergoing a £6 million refurbishment. Public areas, all 79 bedrooms including bathrooms, the restaurant, meetings and events facilities are being refurbished and a brand new spa is being built, so the hotel will offer an impressive location for business or a relaxed venue for leisure.

The SBL solution comprises a new telephony system based on the Alcatel-Lucent OmniPCX including digital handsets for administration users and analogue sets in the guest rooms. In addition, we have installed a new data infrastructure – wired and wireless – that allows hotel staff to use IP wireless handsets instead of DECT.
